6. Ladies Night in Engineering Sciences

15.04.2019 -

On the 11th of April the **6th Ladies' Night for Women in Engineering Sciences** took place and the TUGZ and the MakerLabs presented themselves from their best side. There was an **exciting exchange** and potential future founders informed themselves about the **various start-up opportunities**.

Despite the cold weather, more than 50 interested people found their way to the TUGZ stand and **networked** with each other. It was discussed together with various experts how a successful **start-up coaching** can be implemented alongside the studies and what role the **funding workshops** can play in this.

The **guided tour** then started with two of the eight sponsored MakerLabs of Otto-von-Guericke University Magdeburg. The laboratories "**Mobilität und Logistik**" (iP-LogMO) and the labor inspector Mrs. Judith Zadek as well as "**Arbeitswelt 4.0**" (AWI-Lab) were presented by laboratory supervisor Eric Harnau with exciting and interesting contributions.

This way modern techniques could be explored as well as **example products** could be tried out. The participants were especially pleased that the university laboratories could be used free of charge for projects with new ideas.
